At New River Family Wellness, we know that being a part of a community means helping fill in the gaps in medical care. That's why we offer a few select services to non-members. If you are a patient interested in any of the in-office procedures below, or a practitioner interested in referring a patient for a procedure, give us a call. Current prices and stipulations are available on our website.

VASECTOMY

Dr. Allen performs vasectomies which are permanent sterilization procedures for men who are sure they don't want any more children. Interested men can set up a consultation without a referral. We do require a waiting period between the initial consultation and the procedure.

CIRCUMCISION

Dr. Allen performs circumcisions on newborns less than two weeks of age. These are elective and do not require a referral. Because the timing is important, we ask that you contact the office as soon as you bring your baby home.

COLPOSCOPY

Both Dr. Sullivan and Dr. Allen perform colposcopies, a procedure to closely examine a woman's cervix, vagina and vulva for signs of disease after having an abnormal pap smear. Colposcopies are not elective and require a referral.

LEEP

Dr. Sullivan performs LEEPs (Loop Electrosurgical Excision Procedure). It's a treatment that prevents cervical cancer. A small electrical wire loop is used to remove abnormal cells from the cervix that were found during a colposcopy.
